

Mammals

Mammals have backbones.
They all have hair or fur.
Most mammal babies aren't hatched.

They're born live and their mamas give them milk.

Georgia has lots of cool mammals. They have some things in common, but not everything..... Some fly, others live only in the water. Some are tiny and others are huge.

Pygmy Shrews weigh $\frac{1}{4}$ of an ounce

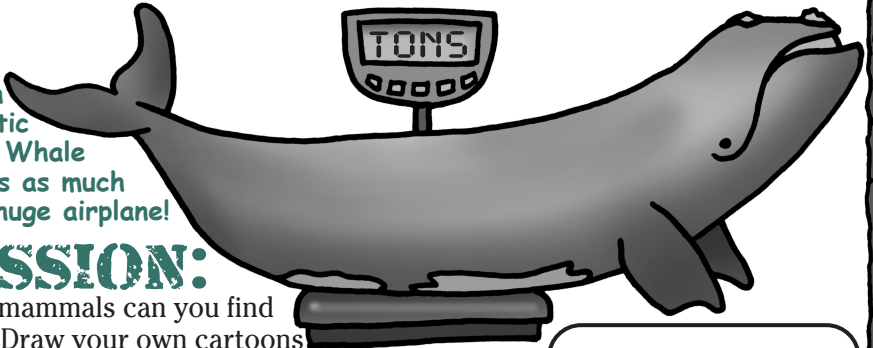

A squirrel's tail is longer than their body to balance on branches

Male Bobcats will bring food to both mama and kittens (unusual among cats)

The North Atlantic Right Whale weighs as much as a huge airplane!

MISSION:

What mammals can you find here? Draw your own cartoons in the boxes. Don't forget to categorize them smallest to largest.
