

# CWD Sample Drop-Off Instructions

Remove the deer's head, leaving at least 4 inches of neck measuring from the jaw line.

Remove the antlers, if applicable. Either remove them at the antler base or remove the skull cap. A saw is provided in the freezer basket.

Complete the provided sample information tag. Heads with incomplete information will not be tested.

Put the head into the provided bag, squeeze out the air, attach the tag to the zip tie, then use the zip tie to seal the bag. Place the bag into the freezer. Use a new bag and tag for each deer.

Visit [GeorgiaWildlife.com/CWD/testing](http://GeorgiaWildlife.com/CWD/testing) for test results. Lanier/Berrien county samples could take 2-6 weeks. Outside Lanier/Berrien counties, results may take several months.
